SUMMARY

Frontend engineer with full-stack reach and 4+ years of experience building enterprise data marketplace platforms and e-commerce applications. Has shipped consistent improvements to performance, test coverage, and team productivity through structured AI tooling adoption. Takes ownership from architecture decisions through to production, with a strong focus on clean code and accessibility.

EXPERIENCE

Software Engineer II — Hashedin

Oct 2023 – Present · Hyderabad, India

- Led 4 engineers shipping an enterprise data marketplace with Webpack Module Federation micro-frontends, SSO and multi-cloud integration (AWS/Azure/GCP); drove 90%+ test coverage via TDD.
- Built end-to-end data product lifecycle with role-based workflows and dynamic form validation — cut onboarding time 3x for non-technical users.
- Cut initial JS bundle 45% via code splitting; Lighthouse CI budgets held Core Web Vitals at 85+ and improved page load 20%.
- Deployed GitHub Copilot & Claude Code across 20+ engineers with adoption guidelines — lifted team velocity 40%.

Software Engineer I — Hashedin

Aug 2022 – Sep 2023 · Bangalore, India

- Owned frontend-backend integration for 3 squads via 15+ GCP serverless functions with automated CI/CD — eliminated manual deployment steps and cross-team integration bugs.
- Redesigned checkout UX with progressive disclosure and actionable error messages — cut payment abandonment 25%.
- Audited keyboard navigation, focus management and ARIA across modal components — achieved WCAG 2.1 AA, eliminating 95% of accessibility issues.

PROJECTS

API Rate Limiter

[View on GitHub](#)

Python · FastAPI · Redis · Lua · Docker · Prometheus · pytest

- Built 4 rate limiting algorithms (fixed window, sliding window, token bucket, leaky bucket) as pluggable FastAPI middleware with a one-line `@rate_limit` decorator — per-IP, per-API-key and per-user scoping.
- Eliminated race conditions using atomic Redis Lua scripts (EVAL); verified zero over-admission under 500 concurrent asyncio requests across all algorithms.
- Shipped X-RateLimit-* headers, Prometheus metrics endpoint, live Chart.js dashboard, 79 unit tests and a Locust load test suite.

BlogForge — Full-Stack Blog Platform

[View on GitHub](#)

FastAPI · PostgreSQL · SQLAlchemy · Alembic · Jinja2 · OAuth2/JWT · Docker

- Built full-stack blog platform with Jinja2 SSR, SQLAlchemy ORM and Alembic migration pipeline — clean schema versioning separate from application code.
- Implemented OAuth2/JWT auth with bcrypt password hashing and HTTP-only cookies to prevent XSS token theft.
- Dockerised app and database with Compose; CI pipeline auto-runs Alembic migrations on every deploy.

SKILLS

Frontend:	React.js, Next.js, TypeScript, Redux, TanStack Query, React Hook Form, GraphQL, Tailwind CSS
Backend:	FastAPI, Node.js, Express.js, Redis, SQLAlchemy, Alembic, OAuth2/JWT, REST APIs, PostgreSQL, SQL
Architecture:	Micro Frontends, PWAs, Core Web Vitals, Performance Optimization, Lighthouse
Testing & build:	Jest, React Testing Library, Playwright, Cypress, Webpack, Vite
DevOps:	Docker, Kubernetes, GitHub Actions, CI/CD, AWS, GCP

EDUCATION

B.Tech in Computer Science — Sree Vidyanikethan Engineering College, Tirupati

Aug 2018 – May 2022

CERTIFICATIONS

- AWS Certified Solutions Architect – Professional
- GCP Professional Cloud DevOps Engineer
- Generative AI RAG Framework — Google Cloud Skill Badge
